

Ansible

Pirms sākam darbu, atjaudinām programmatūru gan uz Ubuntu desktop, gan uz Ubuntu servera (instalēts no jauna) ar apt update un pēc tam ar apt dist-upgrade

1. SSH savienojums

Sākumā ģenerējam jauno ssh atslēgu:

```
aleksandra@aleksandra:~/Desktop$ ssh-keygen
Generating public/private rsa key pair.
Enter file in which to save the key (/home/aleksandra/.ssh/id_rsa):
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in /home/aleksandra/.ssh/id_rsa
Your public key has been saved in /home/aleksandra/.ssh/id_rsa.pub
The key fingerprint is:
SHA256:Xpo03x0d1eX3+lrvsbJzWvyQqV0yXxRCCKwyFSYfahY aleksandra@aleksandra
The key's randomart image is:
+---[RSA 3072]---+
|      E +O.. .. .|
|      *... .. .O|
|      +... .. .|=|
|      oo . .. .O+|
|      o S . . o O|
|      o * ...O= |
|      + . O+=+O|
|      O=.*=|
|      .O+=|
+-----[SHA256]-----+
aleksandra@aleksandra:~/Desktop$
```

Tad nokopējam to ar ssh-copy-id un varam tam slēgties, neizmantojot paroli

```
aleksandra@aleksandra:~/Desktop$ ssh-copy-id aleksandrmitruka@192.168.31.216
/usr/bin/ssh-copy-id: INFO: attempting to log in with the new key(s), to filter out any that are already installed
/usr/bin/ssh-copy-id: INFO: 1 key(s) remain to be installed -- if you are prompted now it is to install the new keys
aleksandrmitruka@192.168.31.216's password:

Number of key(s) added: 1

Now try logging into the machine, with:  "ssh 'aleksandrmitruka@192.168.31.216'"
and check to make sure that only the key(s) you wanted were added.

aleksandra@aleksandra:~/Desktop$ ssh aleksandrmitruka@192.168.31.216
Welcome to Ubuntu 22.04.2 LTS (GNU/Linux 5.15.0-73-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/advantage

Last login: Wed May 31 21:14:15 2023 from 192.168.31.110
aleksandrmitruka@goodserver:~$
```

Pamēģināsim notestēt, vai viss strādā, palaižot testa playbook'u. Tā kā mēs nokonfigurējam ssh(pieslēgšanas bez paroles) un atrodamies vajadzīgajā direktorijā, varam rakstīt komandu saīsinātā veidā. Kā redzams, viss strādā

```
aleksandra@aleksandra:~/Desktop/MyPlaybooks$ cd hello_world/
aleksandra@aleksandra:~/Desktop/MyPlaybooks/hello_world$ ansible-playbook -i hosts playbook.yml

PLAY [My first playbook] *****

TASK [Gathering Facts] *****
ok: [192.168.31.216]

TASK [Ping my hosts] *****
ok: [192.168.31.216]

TASK [Print message] *****
ok: [192.168.31.216] => {
  "msg": "Hello world"
}

PLAY RECAP *****
192.168.31.216      : ok=3    changed=0    unreachable=0    failed=0    skipped=0    rescued=0    ignored=0
```

2. Apache tīmekļa serveris

Attiecīgajā playbook'a, kuru paņemam no e-studijam, nomainām hostus, dažus ssl iestatījumus, pārceļam mājas lapu veidošanu citā playbook'a, paņemam nepieciešamo role. Tomēr ieguvām rezultātus, ka vajag sudo paroli

```
aleksandra@aleksandra:~/Desktop/MyPlaybooks/apache$ ansible-galaxy role install --roles-path ./roles -r requirements.yml
Starting galaxy role install process
- geerlingguy.apache (3.3.0) is already installed, skipping.

aleksandra@aleksandra:~/Desktop/MyPlaybooks/apache$ ansible-playbook -i hosts playbook.yml

PLAY [Ensure apache configuration] *****

TASK [Gathering Facts] *****
Fatal: [192.168.31.216]: FAILED! => {"msg": "Missing sudo password"}
```

Tāpēc savā serverī ievadām sudo visudo un rediģējam failu, pielikot atļaujas rindu ar mūsu lietotāja vārdu

```
aleksandrmitruka@goodserver: ~
GNU nano 6.2 /etc/sudoers.tmp
# Please consider adding local content in /etc/sudoers.d/ instead of
# directly modifying this file.
# See the man page for details on how to write a sudoers file.
#
Defaults    env_reset

4. Piecas rezerves kopijas

Sākuma notestēsīm to koda daļu, kas atbild par kopiju skaita kontroli. Mākslīgi saveidojam kopiju skaitu, kas pārsniedz 5(piem.7) un palaižam playbooku. Kā redzams, tas izpildījās pareizi, pat ja atšķirība ir vairāk kā 1. Tāda realizācija ir vajadzīga, lai playbooks būtu universāls pat tiem gadījumiem, kad mēs to palaižam “pārpildītajai” direktorijai, kurā nav precīzi 5 faili sakumā

```
aleksandra@aleksandra:~/Desktop/MyPlaybooks/copy$ ansible-playbook -i hosts playbook_five.yml

```

Diemžēl, sameklēt ērtu lamp un wordpress lomu vai kolekciju uz ansible-galaxy nepaveicas, tomēr github repozitorija bija atrasts ērts, uzticams risinājums. Bija aizdomas sameklēt autoru uz ansible-galaxy, tomēr tas neizdevās. Tā kā mums nav aizliegts izmantot publiski pieejamus resursus, bija nolemts to izmantot kā pamatu sava darba veikšanai, jo wordpress pieprasa vairākus soļus, kurus paši rakstītu ilgi.

```
aleksandra@aleksandra:~/Desktop/MyPlaybooks/word$ git clone https://github.com/do-community/ansible-playbooks.git
Cloning into 'ansible-playbooks'...
remote: Enumerating objects: 230, done.
remote: Counting objects: 100% (67/67), done.
remote: Compressing objects: 100% (15/15), done.
remote: Total 230 (delta 57), reused 52 (delta 52), pack-reused 163
Receiving objects: 100% (230/230), 39.86 KiB | 949.00 KiB/s, done.
Resolving deltas: 100% (99/99), done.
```

Tālāk bija paveikta hostu konfigurācija, kā arī visus mainīthus iekš vars. Lietotājs nebija pievienots playbooka, tāpēc to norādījām komandā

Kā redzams, playbooks veiksmīgi palaižas, ir nokonfigurēti vairāki svarīgi elementi

```

aleksandra@aleksandra:~/Desktop/hyPlaybooks$ ansible-playbooks/wordpress-ubuntu1801$ ansible-playbook playbook.yml -i hosts -u aleksandradmtrntrika

```

Atveram pārlūku, redzam, ka tiešam viss ir pareizi

Veicam nelienu konfigurāciju un tagad varam brīvi piekļūt savam wordpress. Tas nozīmē, ka datubāze, apache, php tiešām strādā kā vajag

WordPress Installation

Not secure | 192.168.31.190/wp-admin/install.php?step=1

Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Do not worry, you can always change these settings later.

Site Title

Username
Usernames can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

Password [Hide](#)
Medium

Important: You will need this password to log in. Please store it in a secure location.

Your Email
Double-check your email address before continuing.

Search engine visibility ☐ Discourage search engines from indexing this site
It is up to search engines to honor this request.

```

7. Papildus sadaļa: SSL (lūgums to apskatīt, ja tomēr bija nepieciešama lomu izmantošanas demonstrācija vai/un darbā bija trūkumi)

Izmantosim publiski pieejamas lomas, kuri ir atļauti uzdevuma nosacījumos. Iegūstam nepieciešamus failus, rediģējam tos

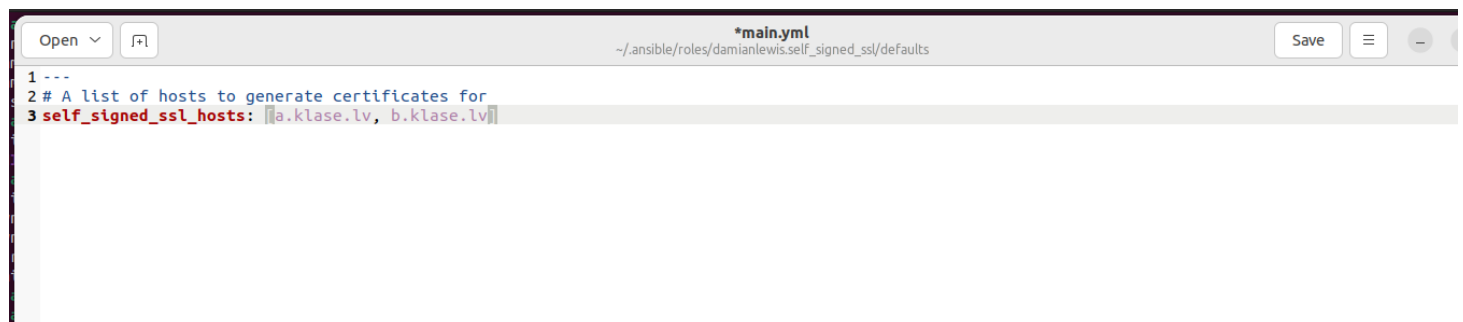

The image shows a terminal window and a file explorer. The terminal window displays the following commands and output:

```
aleksandra@aleksandra: ~/Desktop
aleksandra@aleksandra:~/Desktop$ nsible-galaxy install bguerel.self_signed_certificate
Command 'nsible-galaxy' not found, did you mean:
  command 'ansible-galaxy' from deb ansible-core (2.12.0-1ubuntu0.1)
  command 'ansible-galaxy' from deb ansible (2.10.7+merged+base+2.10.8+dfsg-1)
Try: sudo apt install <deb name>
aleksandra@aleksandra:~/Desktop$ ansible-galaxy install bguerel.self_signed_certificate
Starting galaxy role install process
[WARNING]: - bguerel.self_signed_certificate (v1.0.1) is already installed - use --force to change version to unspecified
aleksandra@aleksandra:~/Desktop$ ansible-galaxy install damianlewis.self_signed_ssl
Starting galaxy role install process
- downloading role 'self_signed_ssl', owned by damianlewis
- downloading role from https://github.com/damianlewis/ansible-role-self-signed-ssl/archive/v1.0.0.tar.gz
- extracting damianlewis.self_signed_ssl to /home/aleksandra/.ansible/roles/damianlewis.self_signed_ssl
- damianlewis.self_signed_ssl (v1.0.0) was installed successfully
aleksandra@aleksandra:~/Desktop$ open /home/aleksandra/.ansible/roles/damianlewis.self_signed_ssl
aleksandra@aleksandra:~/Desktop$
```

The file explorer shows the directory structure of the installed role:

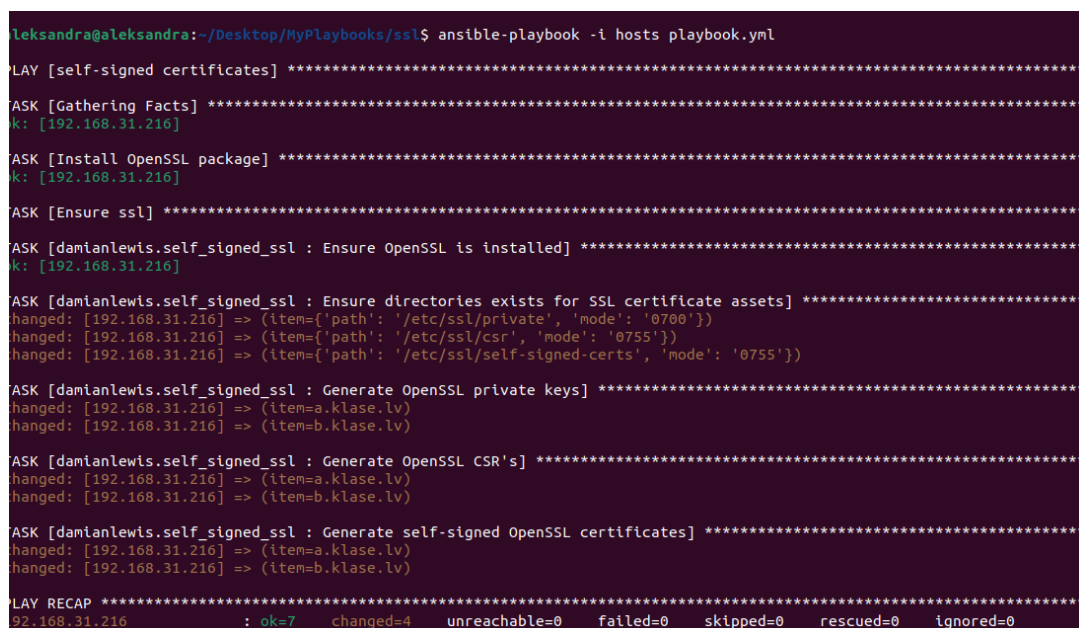

- defaults
- meta
- tasks
- vars
- README.md

The image shows the content of the `*main.yml` file in the role `~/ansible/roles/damianlewis.self_signed_ssl/defaults`:

```
1 ---
2 # A list of hosts to generate certificates for
3 self_signed_ssl_hosts: [a.klase.lv, b.klase.lv]
```

Palaizām playbooku, ka redzams, viss ir normāli

The image shows the output of an Ansible playbook run:

```
aleksandra@aleksandra:~/Desktop/MyPlaybooks/ssl$ ansible-playbook -i hosts playbook.yml
